

Ideal Wash Programmes & Features for Fitness, Training & Performance Clothing

Mix Power System+

Most gym clothes are made of fibres that repel water. In order to wash these garments properly, water has to penetrate the clothing fibres. Through high pressure sprays, the Mix Power System+ facilitates the penetration of the wash solution through the fibres of your fitness and training clothing, thoroughly removing sweat for the best wash performance.

Acrylic Programme

Use the cold pre-wash option with half a cup of white distilled vinegar prior to the main acrylic wash programme to remove stubborn odours from your training clothes.

Perfect 20 Mix & Wash

Thanks to the Mix Power System+, your training clothes can be washed at 20°C with the same wash performance as at 40°C for maximum care of your gear.

Choice of 3 Levels of Wash Intensity

Adjust the level of wash intensity according to your training intensity.

Extra Rinse Button

The synthetic fibres used in performance fabrics may cause allergic skin reactions in athletes with sensitive skin. This reaction is often exacerbated with soap residue in the fibres. The extra rinse button ensures the removal of soap residue thereby eliminating the 'aggravation' factor in skin reactions.
